DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-37, drawn to a method of generating an image on the retina of the eye, classified in class 351, subclass 246.
 - II. Claims 38-55, drawn to a system/apparatus for generating an image on the retina of the eye, classified in class 351, subclass 211, and class 345, subclasses 7-9.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the methods of Group I can be practiced by an materially different apparatus than Group II, such as the virtual retinal displays of Trumbull '411, Maguire, Jr. '371, and McClure et al. '706, cited on the attached PTO-892.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Sheridan Neimark on 15 October 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 3737

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
